Initial neprilysin inhibitors. Initial attempts at inhibiting neprilysin using an oral (racecadotril1) and intravenous (candoxatrilat12) formulation were successful in promoting natriuresis and increasing urinary excretion of ANP.A further neprilysin inhibitor (ecadotril) had similar effects.13 However, a study of chronic use of the oral prodrug candoxatril showed that the initial reduction ...

A case control study from Canada evaluated hospitalizations for drug-related toxicity in a population of older patients who had received one of three drug therapies: glyburide, digoxin, or angiotensin-converting enzyme (ACE) inhibitor . Hospitalization for hypoglycemia was six times more likely in patients who had received co-trimoxazole.

Drug prescribing for older adults - UpToDate

Heart failure (HF) is defined as "a complex clinical syndrome that can result from any structural or functional cardiac disorder that impairs the ability of the ventricle to fill or eject blood". 1 Hyperkalaemia is commonly encountered in HF patients. Registry data estimate the prevalence to be between 16% and 25%. 2,3 The definition of hyperkalaemia varies, but has generally been defined ...

Hyperkalaemia in Heart Failure | CFR Journal

The study from Arshad and colleagues was published in the International Journal of Infectious Diseases in August 2020. Authors note a limitation to their analysis was the retrospective, non-randomized, non-blinded study design. Researchers looked at 2,541 patients, with a median total hospitalization time of 6 days.
