And if you don't want to bother with that, why not try some free audiobooks that don't require downloading?

Deer Population Lab Answers

natural predation would keep the deer population from becoming too large and also increase the deer quality (or health), as predators often eliminate the weaker members of the herd. In 1971, ten wolves were flown into the island. The results of this program are shown in the following table.

Deer: Predation or Starvation

Year	Wolf Population	Deer Population	Deer Population Change
1971	10	2,000	+300
1972	12	2,300	+200
1973	16	2,500	-140
1974	22	2,360	-116
1975	28	2,224	-150
1976	24	2,094	+298
1977	21	1,968	+340
1978	18	1,916	+430
1979	19	1,952	+412
1980	19	1,972	+422

Deer Population Lab Answers

Because squirrels are more dependent on acorns, this would be a growing issue and deer would eventually run the squirrel population out of that specific area of the forest. 10. If squirrels were to bury all of the acorns that fall in an area, this would have lasting effects on the population of the deer, thus causing the squirrel population to continue to grow and thrive in that area.

The deer population would've most likely stayed around 4,000 because the overgrazing had reduced the food source to support the deer. What major lessons were learned from the Kaibab deer experience? Taught land managers that there is a fine balance that must be managed between carrying capacity, food, source, climate, hunting and/or predators.

The Lesson Of The Kaibab Flashcards | Quizlet

Explain how an emigration of deer would impact the population in terms of numbers, limiting factors and carrying capacity. Lab Analysis Questions - Answer the following questions based on the datasheet shared in canvas "Ups and Downs of a Population Data". Be sure to answer ALL parts of the questions and write in complete sentences.
