Wildlife health often refers to the monitoring of diseases and their impacts within wildlife populations. But "wildlife health" is much more than the presence or absence of disease. Wildlife health is the ability of wildlife to thrive in a changing environment. The health of wildlife populations is influenced by many interacting factors.

Anxiety disorders are a cluster of mental disorders characterized by significant and uncontrollable feelings of anxiety and fear such that a person's social, occupational, and personal function are significantly impaired. Anxiety is a worry about future events, while fear is a reaction to current events. Anxiety may cause physical and cognitive symptoms such as restlessness, irritability, easy ...

Anxiety disorder - Wikipedia

Apocalypticism is the religious belief that there will be an apocalypse, a term which originally referred to a revelation, but now it usually refers to the belief that the end of the world is imminent, even within one's own lifetime. This belief is usually accompanied by the idea that civilization will soon come to a tumultuous end due to some sort of catastrophic global event.

Apocalypticism - Wikipedia

1. Introduction. Health is a state of complete physical, mental, and social well-being and not merely the absence of disease or infirmity .Healthcare facilities (HCF) are places where patients with health conditions go for treatment, which is provided by specialists and other care professionals.

Despite a growing body of epidemiological evidence in recent years documenting the health impacts of racism, the cumulative evidence base has yet to be synthesized in a comprehensive meta-analysis focused specifically on racism as a determinant of health. This meta-analysis reviewed the literature focusing on the relationship between reported racism and mental and physical health outcomes.
