A low water cutoff is a device that detects when the fluid level in hot water and steam boilers drops below the minimum safe operating level specified by the boiler manufacturer. If this should occur, the low water cutoff will cut-off the burner and shut down the boiler. If a boiler is "dry-fired" (burned without water in it), it can result in boiler failure, or a possible fire/explosion.

History. The founder, Giovanni Achille Gaggia, applied for a patent (patent number 365726) for the first modern steamless coffee machine on September 5, 1938, to be used commercially in his coffee bar. The machine forced water to flow over the coffee grounds at a high pressure, producing the 'crema' that is unique to espresso. The Gaggia company was founded in 1947 and formally incorporated in ...
